Summary

I am a Software Engineer with about 4 years of personal coding projects and lifecycle experience. Recognized by my school as a proficient developer with a 3.5 GPA. My hopes are to one day be a part of, and eventually lead cross-functional teams in time-pressured environment within a budget. Strong skills of mine include Data Structures, Algorithms, Computer Architecture, Azure and SQL, UI/UX, Python, Java, Nodejs and React.

Real-World Projects I have had the pleasure of working on include:

Problem: Institution in need of a way to manage medical licenses for employees, neatly and efficiently.

Solution: A CRUD operation DBMS written with CSS, JavaFX, Maven and Azure that allows administrative users on different devices to operate and view the same database, securely. I also created an email bot with Python to monitor the database and send emails to specified administrative personnel when an employee is "x" amount of time from an upcoming expiration.

Education

Bachelor of Computer Science (B.S.)

Eastern New Mexico University (2019 - 2023)

Professional Experience

Bank Teller, Wells Fargo Bank N.A.

07/2022 - 04/2023 | Portales, NM

Accurately handle large volumes of cash, process banking transactions digitally or face-to-face. Developed a strong knowledge of banking procedures and the ability to confidently educate clients about features, benefits and pricing.

Digital Marketing Specialist, CMMCGC

07/2023 - 01/2022 | Corona, NM (WFH)

Create and implement inbound marketing strategies to generate high volumes of organic traffic and leads for my client. Improve advertising initiative by executing digital campaigns. Deployed software for daily email marketing communications and generating customer awareness of promotions and product launches.

Student IT Support Specialist, Eastern New Mexico University

07/2021 - 01/2022 | Portales, NM

Communicate with administration and staff to identify problems involving computer networks, infrastructure, and hardware components. Installed and maintained desktop software and add-ons across a network of devices. Track and prioritize IT tickets and requests based on severity and business disruptions. Tackled troubleshooting and problem resolution on the front and back-end of software systems to support end-user technical issues.
